

**M & W INCOM SUPPLY**  
**Letter of Agreement for Monitoring**

The owner understands that as a condition of the warranty, the Manufacturer, or its representative, in this case M & W Incom Supply, will monitor the system during the warranty period (standard two years) for flow, peak dose enable conditions, high level alarm conditions, and other mechanical functions which could result in a high level alarm. This warranty includes two checks per year for a total of four checks approximately six months apart. Items covered as part of this check are listed on the following page.

The system controller monitors the liquid level in the pump tank. In the event of a high level alarm or peak dose enable condition, an alarm will sound.

The owner shall provide American or its dealer/representative with such access to the property and system as is reasonably necessary for American or its dealer/representative to comply with the terms of this Agreement. As soon as an alarm condition occurs, the owner shall notify the installer which condition occurred, the nature of the condition, and where the system is located.

The owner understands and will hold the installer and Manufacturer harmless for alarm conditions and other events beyond their control. Please reference the American Manufacturing Company, Inc. warranty policy (see attached) for additional information. American Manufacturing Company, Inc., nor M & W Incom Supply shall be responsible for damages caused by any type of system failure or for soil suitability, damage due to construction, use, acts of God, or other events.

In the event of a power, pump, or other mechanical failure, the system should be designed to provide at least an additional ¼ day of storage capacity.
